9. OSPF is configured on RTA, RTB, and RTC. GigabitEthernet 0/0/0 interfaces of these routers belong to area 0 and the network types of these interfaces are broadcast. The router ID of RTA is 1.1.1.1, and the DR priority of GigabitEthernet 0/0/0 on RTA is set to 0. The router ID of RTB is 2.2.2.2, and the DR priority of GigabitEthernet 0/0/0 on RTB is set to 255. The router ID of RTC is 3.3.3.3, and the DR priority of GigabitEthernet 0/0/0 on RTC is the default value.

Which of the following statements is true about the DR and BDR on the network?

- A. RTC functions as the DR, and RTB as the BDR.
- B. RTB functions as the DR, and RTC as the BDR.
- C. RTA functions as the DR, and RTB as the BDR.
- D. RTB functions as the DR, and RTA as the BDR.

40. Which of the following statements about static and dynamic routes are true?

- A. When creating a static route, you must specify both the outbound interface and next hop.
- B. Dynamic routing protocols can be classified into distance-vector routing protocols and link-state routing protocols based on their working mechanism and routing algorithms.
- C. Static routes have low requirements on the system and are applicable to simple, stable, and small-sized networks.
- D. Dynamic routing protocols can automatically discover and generate routes and are more suitable for large-scale networks.
